Redcare Secure Solo
Cost effective, wireless alarm signalling

Crucial new certification assures great performance

We're proud that our leading Redcare Secure Solo product now has crucial, third-party certification that meets rigorous insurance requirements for Alarm Transmission Systems (ATS). This LPS 1277 certification is the strongest assurance you can get that your alarm signalling system is the best choice available.

Your certified alarm signalling system gives you:

- Peace of mind that your premises are fully protected
- Fewer false alarms and increased reliability
- Reassurance that you've chosen a high-quality product
- Insurers favour LPS 1277 certified systems

LPS 1277: Issue 3
Cert No. 1270c

What is Redcare Secure Solo?

Redcare Secure Solo is the most cost-effective wireless only BT Redcare alarm signalling system that complies with grade 2 alarm signalling, using BT's trusted Redcare network.

It uses mobile phone technology to deliver an alarm signal which is always monitored. The Alarm Receiving Centre (ARC) will be alerted in the case of any loss of service.

If you don't have a phone line you can still benefit from a high-quality monitored alarm system as Redcare Secure Solo can be installed anywhere that has a good mobile network signal.

Key benefits

Back-up at the ready
The intelligent roaming SIM automatically connects to the best available UK mobile network. If it becomes unavailable, the roaming SIM will automatically select the next best network.

No additional set up or installation costs
This system doesn't need a phone line so it can be used everywhere and anywhere without any additional costs for a new line.

Easy installation
Redcare Secure Solo is quick to install and can easily be moved from one location to another so it's suitable for urgent service provision, temporary deployment and short term use.

Flexibility
You can change where you locate the unit as many times as you want within the minimum 12 month rental period.

Round-the-clock support
Your installer will be backed up by our helpdesk and UK-wide engineering team so help is on hand 24/7, 365 days a year.

No risk of signal interference
The dedicated BT Redcare network is unique to BT - no other system uses it, which means there is no risk of your signal getting lost.

No extra call costs
We apply no additional charge for communications between your alarm and the BT Redcare network.

Easy to upgrade
Redcare Secure Solo can be easily upgraded to dual path signalling (using a phone line or broadband) if your risk assessment or future technology requirements change.

Regulatory compliance
Redcare Secure Solo is compliant with British and European Standards for grade 2 alarm signalling.

Versatility
Redcare Secure Solo is perfectly suited to mobile assets, such as boats, heavy machinery and catering trailers, as well as construction sites, vacant properties, remote buildings, cabins and outbuildings.

Definitions

Alarm signalling grading system

There are 3 possible grades: 2, 3 and 4, with 4 being the highest and most secure. Please check your alarm signalling grade requirements with your insurance company.

Alarm Transmission System (ATS)

The whole system that delivers alarm signals from a customer's premises, to an ARC.

ATS 5 compliant

This refers to Alarm Transmission System performance requirements, for which there is a rating of ATS 1 to ATS 6.

ARC (Alarm Receiving Centre)

This is where the alarm systems are monitored and if an alarm signal is received, the ARC will be in touch with the named key holder or the emergency services.

Loss Prevention Certification Board (LPCB)

A world-renowned approval body for fire and security products and services, owned by BRE Global.

LPS 1277 3.0

The current version of the UK loss prevention standard for alarm transmission systems (ATS).

Mobile assets

Mobile assets refer to assets sited in a fixed location, such as a boat moored in a harbour. It's the customer's responsibility to notify the ARC of the location of the asset and if that location changes. Redcare Secure Solo will only signal an event, not the location of that event.

Roaming SIM (Subscriber Information Module)

This is mobile phone technology which automatically connects to another UK mobile phone network in the event of failure, without relying on a signal from a single operator.

Third-party certification

Confirmation from an independent approval body in the fire and security industry, that the alarm transmission products and services have been independently shown to meet the performance claimed and will continue to do so.

About BT Redcare

BT Redcare is part of BT Group plc and has been a leader in the fire and security market since 1985. We are a leading supplier of alarm signalling services in the UK, securing hundreds of thousands of homes and businesses with our services.
